## Interpreting Segment Specifications

## Key Terms

<b><i>Segment Identifier</i></b>	Each segment has a unique identifier of usually 2 or 3 characters long. This identifier serves as a label for the data within the segment.
<b><i>Data Element Reference Designator</i></b>	This is a structured 4-character designator used to identify the position of an element in a segment within a document. The first 2 characters is the Segment Identifier, and the next 2 characters is a 2-digit sequence that indicates the sequential order in which the data element appears in the segment identified by the Segment Identifier.
<b><i>Data Element Reference Number</i></b>	This is a number that is assigned to uniquely identify a data element. It differs from the Data Element Reference Designator in that it does not indicate the segment and sequence in which this data element appears within a document. It tells you what kind of a data element this is. You may find the definition of all data elements in the ASC X.12 Data Dictionary.
<b><i>Data Element Name</i></b>	This is a free form description given to a data element. This name is assigned by the X.12 committee, and corresponds to the name that is given in the ASC X.12 Data Dictionary.
<b><i>Best Buy/Future Shop Requirement Indicator</i></b>	<p>This is an indicator assigned by Best Buy/Future Shop to indicate to our Trading Partner whether a segment or a data element is mandatory in this document or segment within a document of this type sent to Best Buy/Future Shop. Please note that:</p> <ul style="list-style-type: none"> <li>● Segments and Elements that are mandatory in the X.12 standards are also mandatory by default in Best Buy/Future Shop's Implementation.</li> <li>● The absence of a mandatory segment or element will cause the document to be rejected.</li> </ul> <p>The valid values of this indicator are:</p> <ul style="list-style-type: none"> <li>● <b>M</b> – This indicates that the segment or element is Mandatory</li> <li>● <b>O</b> – This indicates that the segment or element is Optional</li> </ul>
<b><i>X.12 Requirement Indicator</i></b>	<p>ASC X.12 standard requires certain segments in a transaction set and certain elements within a segment be always present in a transmitted document, and that certain segments and elements be present should other segments and elements are present in a document. This is an indicator assigned by ASC X.12 committee to indicate whether a segment or a data element is mandatory in this document or segment within a document of this type. Please note that:</p> <ul style="list-style-type: none"> <li>● Segments and Elements that are mandatory in the X.12 standards are also mandatory by default in Best Buy/Future Shop's Implementation.</li> <li>● The absence of a mandatory segment or element will cause the document to be rejected.</li> </ul> <p>The valid values of this indicator are:</p> <ul style="list-style-type: none"> <li>● <b>M</b> – This indicates that the segment or element is Mandatory</li> <li>● <b>O</b> – This indicates that the segment or element is Optional</li> <li>● <b>C</b> – This indicates that the segment or element is Conditionally Mandatory. If certain other segments or elements are used in the same document or segment, this segment must also be present. For more information on the conditions governing a particular segment or element, please refer to the ASC X.12 Data Dictionary.</li> </ul>

**Data Element Type**

A data element can be of one of six types in ASC X.12:

Type	Description
ID	An identifier as defined in ASC X.12 Data Dictionary
AN	Alphanumeric
DT	Date
Nn	Numeric with implied decimals (no decimal point appears)
R	Numeric with explicit decimals (decimal point appears)
TM	Time

**Data Element Size**

All data elements are assigned a minimum and maximum length.

Example: 3/3

This indicates the minimum and maximum length of the data element. The number to the left of the slash indicates the minimum length; the number to the right of the slash indicates the maximum length.

In this example, it indicates that the data element has a minimum length of 3 and a maximum length of 3. That is, it is required to be of length 3.

**Best Buy/Future Shop Usage**

This is a list of values of what Best Buy/Future Shop is expecting to receive or send in a particular data element. A brief description or definition is attached where appropriate.

**Data Segment Example**

This is an example showing how a particular segment can be used in a transaction.

## Customizations and Special Instructions

With this new edition of Best Buy/Future Shop's Version 4010 Purchase Order Implementation Guide, there are 2 new additions.

First is the addition of a new code in the BEG02 element. The new code is 'RO' which is going to be used to denote a 'Rush Order'. A rush order is to be dealt with differently than a regular Purchase Order. The 'RO' qualifier will only be sent to Trading Partners after Best Buy/Future Shop representatives have discussed the use of this order type with the individual Company.

Second is the modification of Best Buy/Future Shop's usage of the DTM01 element. Best Buy/Future Shop used the 037 code to indicate 'Ship not Before' date. This code has been changed to 071 'Requested for Delivery'. This change will alleviate any misunderstandings regarding the allowable dates for shipment for a given PO.
